Count on Bludot Custom Bending Brake Line Solutions

Bludot custom bending and brake line kitting solutions support lean manufacturing by streamlining the production steps on the assembly line

Bludot custom bending and brake line kitting solutions support lean manufacturing by streamlining the production steps on the assembly line

Bludot works with your internal manufacturing and engineering team to create custom bending and brake line kitting solutions that support lean manufacturing by streamlining the production steps on the assembly line

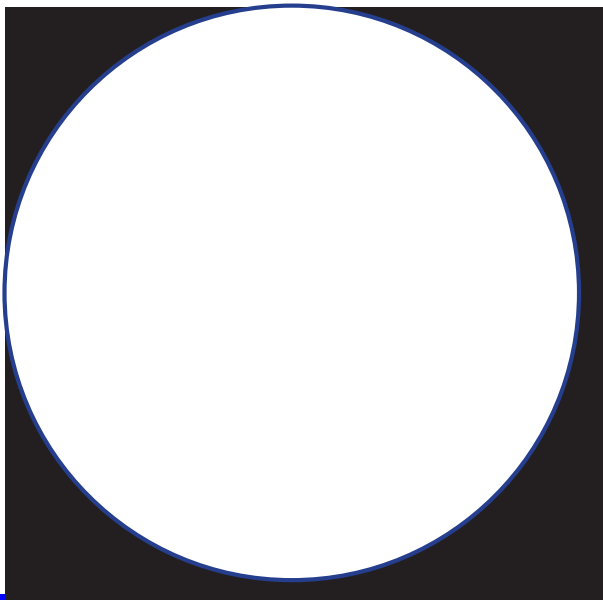

Custom bending and brake line kitting allow OEMs and maintenance facilities to streamline operations with brake line kits that include custom bending and brake line kitting solutions

Bludot custom bending and brake line kitting solutions support lean manufacturing by streamlining the production steps on the assembly line

Bludot custom bending and brake line kitting solutions support lean manufacturing by streamlining the production steps on the assembly line

Bludot custom brake line kits can reduce the need for the manufacturing and maintenance facilities to order, stock, and warehouse parts from multiple suppliers

Custom Hose Crimping Hydraulic Brake Systems

Beyond custom bending of hydraulic brake lines, Bludot also provides OEMs, distributors, and service facilities with custom hose crimping for hydraulic brake systems.

Custom cutting various lengths of hose and crimping multiple manufacturing steps in-house during assembly

Bludot custom crimped brake hoses are also a part of the components for assembly kits supporting OEM production or replacement brakes for trailers.

An OEM can specify the types of connector ends preferred for its custom hoses

As part of the custom crimping process, each hose is then pressure tested to ensure it meets the required specifications

Bludot custom crimped brake hoses are also a part of the components for assembly kits supporting OEM production or replacement brakes for trailers.
