BLUDOT TRAILER BRAKE LINE KITS SUPPORT OEM ASSEMBLY

Trailer Brake Kitting and Parts Supply for Manufacturing

Bludot Manufacturing custom engineers, builds and assembles the highest quality, pre-packaged brake line kits for manufacturing assembly lines and major trailer maintenance facilities.

OEMs can count on Bludot's complete kitting customized for the assembly line with packages designed for each trailer model and specification. Bludot specializes in designing and packaging kits that are optimized for your assembly line operation. Pre-packaged and delivered to your facility—most of the time within 48 hours of the order—Bludot is your partner for fast brakes.

Put Blutdot into the supply chain mix for packaged kits and parts for hydraulic brake systems and brake lines with custom bending available. Blutdot also provides air/hydraulic, straight air or flexible line kits, ABS and non-ABS system parts, along with a variety of controllers, hard to source parts and components. OEM's save time and money consolidating brake line parts and kits for assembly with Blutdot brake systems.

For over 40 years Bludot Manufacturing has supplied brake systems and parts to the trailer manufacturers of North America. Partner with Bludot as your one-stop-shop to reduce the in-house sourcing and purchasing headaches of brake systems for assembly.

Bludot's programmable CNC straight-tube cut-off line is the fastest, most flexible, cut-off system ever developed for brake line production. Each Bludot custom brake line system is engineered to meet your specifications and timelines.

MANUFACTURING

Products and Services for Manufacturers and Assemblers

- When it comes to hydraulic trailer brake lines, Bludot offers double wall brazed, low-carbon steel tubing with a standard OD finish of Aluminum Galfan (AG), copper-nickel and stainless steel for high-end, corrosion protection
- Bludot copper nickel brake lines provide a more affordable alternative for hydraulic trailer brake lines with much of the corrosion resistance of stainless steel. Copper nickel brake lines are U.S. Department of Transportation (DOT) approved for hydraulic.
- Each Bludot custom brake line system is engineered to meet your specifications and timelines. Feed length, speed and batch sizes are all programmed and controlled to the highest accuracy through the touch screen CNC interface.
- In-house sub-assembly maximizes the value of your order and better serves your assembly processes. Once your custom order is completed, all critical parts of your assembly order are batched and packaged to your specifications.
- With delivery parameters designed for today's OEM lean manufacturing and JIT environments, call on Bludot's 40 years of experience providing trailer brake assemblies and replacement kits to meet your demands.

Bludot Brake Systems for Maintenance and Service Facilities

- Bludot's pre-packaged brake kits for the OEM production line are also designed to provide customized solutions for large trailer maintenance facilities.
- Bludot manufacturing also offers custom bending solutions to the exact engineering specifications of the trailers common to each fleet. Custom bending brake lines allows OEMs and maintenance facilities time saving, and more efficient installs.
- Bludot JIT services fit well one-off, quick turns for maintenance and service facilities. Bludot acts as a custom consolidator, kitting and packaging all the components needed for a complete brake line replacement in the shop.
- Partnering with Bludot eliminates the need for the facility to order, stock, and warehouse parts from multiple locations.
